

SAO ($\varepsilon_l = 0.3$, $\varepsilon_h = 5$)

Published values (arXiv:2607.07508, Sec. 4.1, math/TIR runs), not exaggerated: the box is $[0.7, 6.0]$; coding-agent runs use $\varepsilon_l = 0.8$, $\varepsilon_h = 3.0$.
 The ratio axis and the right-hand colour scale are both wider than in Figures 2-3 -- consequences of that box.
